

L6 ANSWER 28 OF 32 CAPLUS COPYRIGHT 2007 ACS on STN

ACCESSION NUMBER: 1995:878895 CAPLUS

DOCUMENT NUMBER: 123:280304

TITLE: Fluorescent phenylboronic acids for detection of saccharides

INVENTOR(S): James, Tony; Sandanayake, Saman; Shinkai, Seiji

PATENT ASSIGNEE(S): Research Development Corporation of Japan, Japan

SOURCE: Brit. UK Pat. Appl., 24 pp.

CODEN: BAXXDU

DOCUMENT TYPE: Patent

LANGUAGE: English

GI For diagram(s), see printed CA Issue.

AB Fluorophore I (R1 = aryl, preferably anthryl; R2 = alkyl, aryl; m, n = 0-2), in which an amino N atom can interact intramolecularly with the boronic acid, emits high-intensity fluorescence upon binding to saccharide(s), and is therefore suitable for use in the detection of saccharide(s). Thus, o-tolylmagnesium bromide reacted with tri-Me borate to form o-tolylboronic anhydride, which was brominated on the Me group with N-bromosuccinimide and refluxed with 9-(methylamino)methylantracene to form I (R1 = 9-anthryl, R2 = Me) (II). An aqueous solution of II fluoresced intensely in the presence of glucose or fructose.
